

Computer Science Resources

All of these resources can be borrowed from the Library. Search your **Online Library Catalogue** to find even more for study skills, careers, wellbeing and fiction.

Develop your interest and independent learning skills by reading around your subject.

Object: the personal computer: few inventions have had a greater impact on modern life than the personal computer. Discover how the PC came to be, and what its future holds. *Modern History Review*, April 2021 issue.

The future of the brain: advances in computer interfaces: ideas once considered to be within the realm of science fiction are rapidly becoming realistic propositions. Mind control of robotic arms, implanted brain devices for memory enhancement and even telepathy - anything appears possible. *Biological Sciences Review*, April 2021 issue.

Bringing in billions with multiplayer: from basic bat and ball games played on a black and white TV screen to beautifully rendered HD battles featuring hundreds of participants from all over the globe, multiplayer games have changed beyond belief in just over half a century. This article tracks their rise and looks at what the future holds. *Media Magazine*, December 2019 issue.

Computer-mediated-communication: looks at how texts such as web forums and online newspaper comments can be analysed using different 'language lenses'. *Emagazine*, December 2015 issue.

Sentencing by computer: online courts and dispute resolution. A Level Law Review, January 2018 issue.
